Nebula - Raines 230 kV Electric Transmission Line Project

Dear Neighbor,

Dominion Energy prioritizes providing reliable, affordable and increasingly clean energy that powers your every day. This is an important update about the Nebula – Raines 230 Kilovolt (kV) Electric Transmission Line Project in your community.

As a reminder, this project was needed to meet the area's growing energy needs, continue reliable electric service and maintain compliance with federal reliability standards. An application was filed with the Virginia State Corporation Commission (SCC) on January 24, 2025. In the application, five routes were proposed within the study area located in Mecklenburg County, Virginia. **On October 3, 2025, the SCC issued a final order and approved Route 5 (blue) for construction.**

Our team would like to thank each community member who participated in the project planning process. The planning process will continue through the remainder of 2025 preceding construction. Pre-construction activity is expected to begin mid-2026. The anticipated project completion date is late 2028.

Visit our website DominionEnergy.com/nebula-raines to view our filed SCC application and their final order. Along with other project documents, you are invited to view the updated interactive route map – *GeoVoice by Power Engineers*.

Our commitment to community engagement will continue through the remaining phases of the project. Please do not hesitate to reach out to our team with questions. You may contact our project team by email at powerline@dominionenergy.com or by phone at 888-291-0190. Thank you for your understanding as long-term reliability investments are planned for your community.

Sincerely,

The Electric Transmission Project Team

Enclosure: Project timeline and Approved Route Map

Date	Action
May 2024	Project Announcement
Summer 2024	Community Outreach
Winter 2024	Filed application with the Virginia State Corporation Commission (SCC)
October 2025	SCC issued final order
Mid 2026	Finalize: • Permitting • Engineering • Pre-Construction Outreach
Late 2026	Construction to begin
Late 2028	Construction complete; restoration begins
