Tunis-Boykins 115 kV Electric Transmission Line Rebuild Project

At Dominion Energy, we are committed to providing the reliable, affordable, and increasingly clean energy that powers your every day. To replace aging equipment and maintain reliable service for our customers, we are rebuilding an existing 115 kilovolt (kV) electric transmission line near Winton, North Carolina. This project will be completed in 3 phases. Phase 1 will take place between our Tunis and Mapleton substations.

MORE

Preconstruction activities for Phase 1 are expected to begin in late November 2024, and construction is scheduled to start in January 2025. During this timeframe, you may notice our contractors in and around the right of way installing construction entrances and delivering equipment. These construction entrances should not impact local roadways. Our work will take place during hunting season and our crews work where hunters may be active. Our crews will be wearing high-visibility work vests to ensure they are easy to see. Please share this information with anyone who hunts on your property to help maintain a safe working environment.

We are dedicated to working safely and courteously in your community. Thank you for your patience while we complete this important reliability project.

Protecting the grid against natural and man-made acts is a top priority. You can learn more about our commitment to safety at powerlines101.dominionenergy.com.
