We are working in your community

Yadkin-Fentress 500 kV Electric Transmission Project

At Dominion Energy, we provide the reliable, affordable, and increasingly clean energy that powers your every day. We are replacing 13.5 miles of an existing 500 kilovolt (kV) transmission line with two 500 kV lines between our Yadkin and Fentress substations in the City of Chesapeake,

Virginia. This project will maintain reliability of the transmission system and integrate new electric generation with the grid.

During overhead work, we install temporary guard structures as a safety measure. Guard structures may be wooden poles temporarily embedded in the ground or arms attached to mobile vehicles.

If we need to place a temporary wooden guard structure on your property, it will be removed after aerial line work is complete. We will refill the holes and stabilize the soil with grass seed and straw.

We are committed to working safely and courteously in your community. Thank you for your patience.

Representative photo of a typical wooden guard structure.

Protecting the grid against natural and man-made acts is a top priority. You can learn more about our commitment to safety at powerlines101.dominionenergy.com.

TEMPORARY GUARD STRUCTURES

Protects pedestrians and vehicles below transmission lines

Placed in various locations in the right of way

Removed once overhead work is complete

Upon work completion, we will restore the right of way.
