

# Dominion Energy Launching Municipal Electrification Program

## Program Overview

Transportation is the largest source of carbon emissions in the United States, and we are committed to reducing it in our communities to provide a cleaner energy future for our customers.

As a part of our commitment, Dominion Energy is launching a municipal electrification program in Virginia to support localities that are interested in transitioning vehicles of all types in their fleets to cleaner, more efficient electric models.

Under the program, Dominion Energy will provide a purchase incentive (varies by vehicle type and class) to help offset the cost of replacing traditional combustion engine vehicles with electric models. To make the transition to electric even easier, in most instances, Dominion Energy will provide the municipality with a complimentary charging port for each vehicle purchased.

Both the charging infrastructure and the incentives will be funded with shareholder dollars.

## Benefits

### Sustainability Leadership

Helps municipalities meet sustainability goals and shows leadership on clean transportation efforts.

### Cleaner Air

Electric vehicles produce no tailpipe emissions, leading to cleaner air in the communities where they operate.

### Lower Costs

Electric vehicles can be up to three to five times cheaper to operate and maintain than their combustion engine counterparts.

### Performance

Electric vehicles offer instant torque, providing quick, smooth, responsive acceleration. Some models also provide similar driving ranges of combustion engine counterparts.

Actions Speak Louder

### **What are the benefits for municipalities?**

This program will help municipalities transition their vehicle fleets to electric, leading to cleaner air in the community and reduced fleet costs. The program will also help municipal customers meet their own sustainability goals and show leadership on clean transportation efforts.

### **How does the program work?**

Dominion Energy will help offset the costs for municipalities to replace traditional combustion engine vehicles in their fleets with cleaner, more efficient electric models by providing a purchase incentive (incentive varies by vehicle type and class). Additionally, in most instances, the municipality will be provided a complimentary charging port for each vehicle purchased as a part of this program (excluding class 8 vehicles). Lastly, a municipality that applies for and is awarded 10 or more vehicle incentives will be eligible for a complimentary fleet assessment.

### **What will be the cost to the localities?**

Municipalities who choose to participate in the program will pay for the purchase of each electric vehicle, minus the incentive offered by Dominion Energy for that vehicle type. If applicable, the EV charging infrastructure for each vehicle will be provided at no cost for 10 years. The exact cost to municipalities will be dependent on which vehicles they select.

### **How can interested municipalities apply?**

The application is available on Dominion Energy's website at [DominionEnergy.com/virginia/save-energy/electric-vehicles/municipal-ev-program](https://www.dominionenergy.com/virginia/save-energy/electric-vehicles/municipal-ev-program).

### **What is the deadline for applications?**

Municipalities must apply by January 31, 2022 to be eligible for consideration.

### **How does this program fit into Dominion Energy's sustainability/net zero goals?**

Dominion Energy is working to reach net zero emissions by 2050, and fleet electrification goals are part of that journey. And, we want to go beyond our own emissions and help our customers decarbonize as well. This program will help our customers decarbonize, with a goal of enabling municipalities to reach their individual sustainability goals.

### **What vehicle incentives are available for all-electric vehicle purchases?**

- \$7,500 toward a sedan, SUV or truck
- \$15,000 toward a Police, EMS support, or Fire support vehicle
- \$3,500 toward a Police motorcycle
- \$2,500 toward an ATV/utility vehicle
- Up to \$25,000 for class 3-7 vehicles (non-truck)
- Up to \$100,000 for class 8 heavy duty vehicles
