Churchland - Hodges Ferry 115 kV Electric Transmission Rebuild Project

Dear Neighbor:

At Dominion Energy, we are committed to providing safe, reliable, and affordable electricity to the communities we serve. You are receiving this letter so we can update you on construction activities on the Churchland - Hodges Ferry 115 kilovolt (kV) Electric Transmission Line Rebuild Project in the cities of Chesapeake, Suffolk, and Portsmouth, Virginia.

We have completed this project, which included rebuilding 5.2 miles of the existing transmission line between our Churchland and Hodges Ferry substations with new structures that are similar in height and appearance. This work was necessary to help maintain reliable electric service in your area.

Now that construction is complete, we are removing access roads and wooden matting, and are restoring the right of way to its original condition. You may notice our crews or contractors in the right of way through spring 2023 monitoring the re-stabilization effort. Once re-established, vegetation growth will be regularly maintained by trimming, pruning, and/or applying targeted, low volume applications of herbicides approved by the Environmental Protection Agency. This routine vegetation management will ensure continued service reliability of the transmission line. For more information about this project, visit [DominionEnergy.com/Churchland](https://www.dominionenergy.com/Churchland).

We appreciate your patience and understanding while we completed this important project in 2022. For questions or concerns, please contact us by calling 888-291-0190 or by sending an email to powerline@dominionenergy.com.

Sincerely,

The Electric Transmission Project Team

Churchland-Hodges Ferry 115 kV Electric Transmission Rebuild Project

Quick Facts:

- Approximately 5.2-mile rebuild
- Uses existing right of way corridor
- Replacement structures look similar and are located near the original structures
- Construction occurred between August and December 2022
