our website.

AT DOMINION ENERGY, we are committed to working safely and courteously in your neighborhood. You are receiving this postcard because we are currently preparing to rebuild an electric transmission line between our Clubhouse and Lakeview substations located in Greensville County, Virginia and Halifax County, North Carolina.

After nearly five decades of service, the structures and related components are at the end of their service life and need to be replaced to ensure reliable operation of the transmission line.

Throughout the next few weeks, you will see our crews and contractors accessing the right of way corridor to begin preconstruction activities, such as placing stakes at locations for soil boring. The soil boring process includes drilling holes to sample the soil and assess its makeup. Soil borings help ensure the concrete foundations will provide adequate stability for the transmission structures. Each hole will be refilled before we move on to the next one. During this time, you can expect to see personnel on foot or in vehicles accessing the right of way, which may include use of access roads outside the right of way. We do not anticipate any interruptions to your electric service due to this project.

Currently, construction is scheduled to begin in April 2022 after all necessary permits and approvals are received. We will continue to keep you updated as activities progress.

In addition, we want to inform you that in the wake of ongoing public health concerns from the spread of the coronavirus, we are mindful of our activities and maintaining property owner interactions with the appropriate social distancing. The work we do is integral to maintaining grid reliability and our crews will continue to perform work as needed to provide reliable energy.

Thank you for our patience and understanding as we work to complete this important project.
