

MAPLEWOOD SOLAR PITTSYLVANIA COUNTY

OVERVIEW

Dominion Energy is working to protect the environment and Virginia's future while serving our customers. With a goal to achieve net zero emissions from our electric and gas infrastructure by 2050, we are also supporting customers working to meet their own renewable energy goals.

One such project that will serve dedicated customers is our proposed Maplewood Solar Facility, which will be up to a 120 MW facility. The project encompasses approximately 1,500 acres in Pittsylvania County, located near the community of Climax, on the east and west sides of Climax Road. This project was obtained by Dominion Energy in 2019.

In addition to supporting a clean and sustainable energy future in Virginia, projects like Maplewood Solar provide many benefits to the local community. Projects use Virginia and locally-based suppliers and labor, help create clean energy jobs, and increase local tax revenues.

QUESTIONS AND CONTACT INFORMATION

While we believe this is a perfect opportunity to work within existing guidelines to advance renewable energy in Virginia, we want to reassure you that we are here to listen.

Should you have any questions or comments on this project, please feel free to contact **Jason De La Cruz (804-205-8268)** at virginiasolar@dominionenergy.com.

TYPE

Utility-Scale Solar Project

LOCATION

Pittsylvania County, VA

DESIGN

Ground mounted single-axis tracking facility

SIZE

Up to 120 MW, enough to power 30,000 homes at peak output

ANTICIPATED TIMELINE

Construction on Maplewood Solar began in the summer of 2020 and is expected to be complete around mid-year of 2022.
