

Five Things to Know:

Dominion Energy's First Offshore Wind Project

- Dominion Energy will become the first company in the Mid-Atlantic to harness the power of offshore wind with our new project, called ***Coastal Virginia Offshore Wind***. The project builds on our pledge to deliver cleaner, renewable energy to customers.
- In partnership with global wind leader DONG Energy of Denmark, we will build two 8-megawatt wind turbines 27 miles off the coast of Virginia Beach.
- The project will provide strong economic benefits to the Hampton Roads region, which is ideally suited for additional offshore wind development due to its top-notch port and ship-building facilities.
- Design and engineering work will begin immediately, with turbines expected to begin producing electricity by late 2020.
- This is an important first step that could lead to large-scale offshore wind development for Virginia and the United States.
