Local Power Line Project Information

Mt. Storm-Valley 500 kV Electric Transmission Rebuild Project

Use your iPhone camera or the QR reader app on other smartphones to visit the project page on our website.

AT DOMINION ENERGY, we are committed to working safely and courteously on your property. You are receiving this postcard because we are preparing to start construction on the West Virginia portion of the Mt. Storm-Valley 500 kilovolt (kV) electric transmission line. The structures are either on your property or we need access to your property to reach the structures.

Pending necessary approvals, construction activities will begin in June 2019 along the existing right of way corridor in Grant, Hardy, and Pendleton counties. Our goal is to complete construction on this 34-mile section by the end of 2020. After construction is completed and the line is energized, right of way restoration will begin and last through summer 2021.

We invite you to an informational meeting to learn more about this project and its impact on your property. There will not be a formal presentation at this meeting, but our electric transmission construction experts will be on hand to answer any questions or concerns you may have.

We will continue to keep you updated as construction activities progress. Your electric service will not be interrupted by this project. Thank you for your understanding and patience as we work to maintain reliable electric service in your neighborhood.
