

# Poland Rd 230kV Transmission and Substation Project

---

Dominion Virginia Power is planning to add facilities to meet the growing demand for electricity in Loudoun County.

---

The successful economic development efforts of Loudoun County have resulted in electrical loads that are projected to exceed the capabilities of the electric infrastructure currently in place in the Dulles area. The forecasted power demand increase over the next few years will eventually strain and outgrow the system. To address this, Dominion is planning a new electric transmission project in this area. This is a necessary project to support the area's thriving business community while maintaining overall reliability.

## Overview:

- A new 230kV double circuit transmission line, approximately four miles long, will need to be constructed requiring new right of way 100 feet wide near the Route 50 corridor to a Dominion substation located east of Poland Road on Route 50.

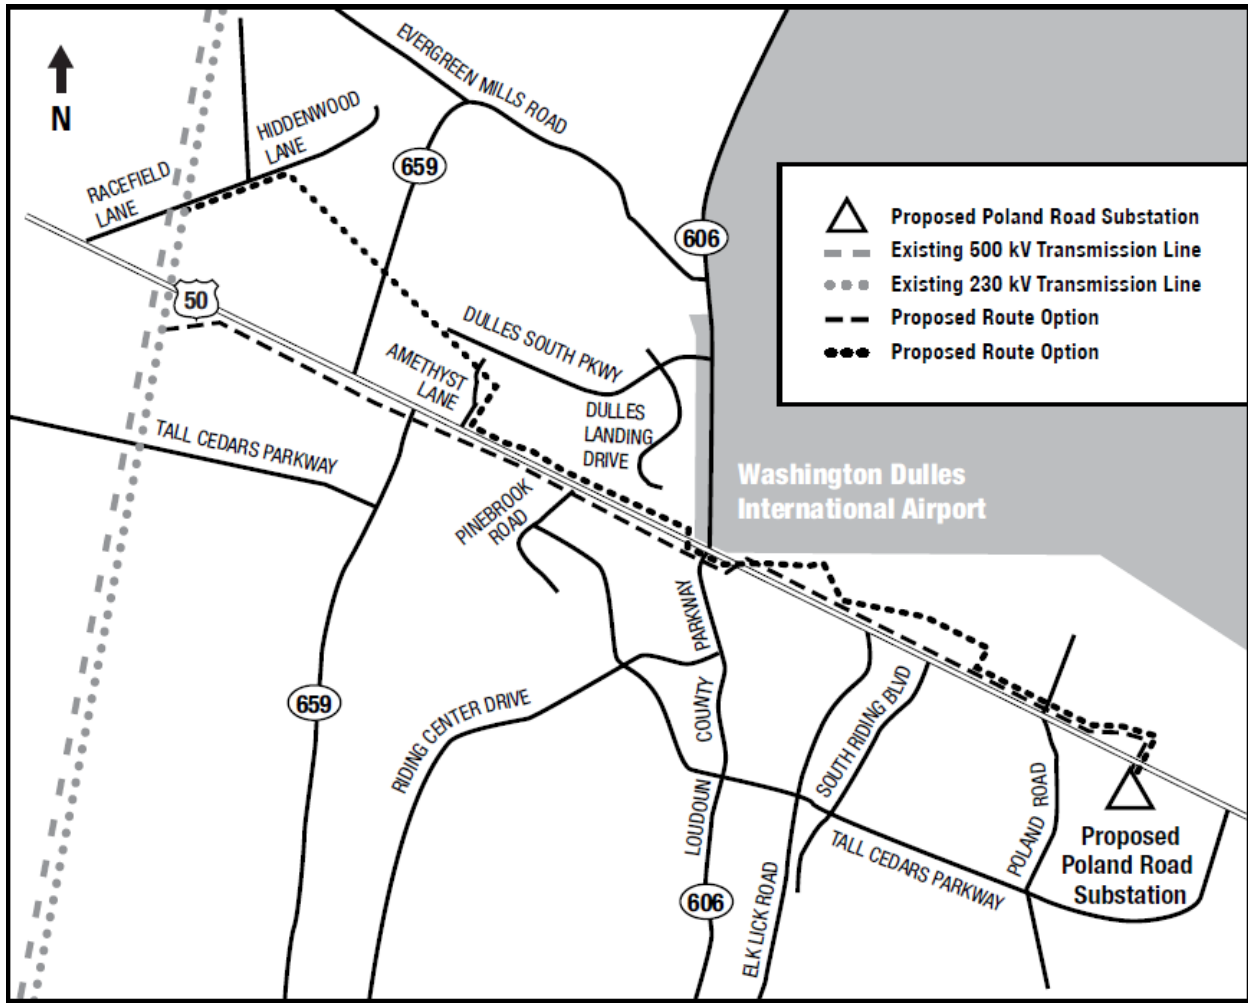

## Benefits:

- Maintains federal and company standards while addressing the rapid commercial/high tech sector growth in a prudent and safe manner
- Provides needed electrical capacity to maintain overall reliability for the community
- Supports continued economic development in the area

## Preliminary Schedule

<b>Early Spring 2015</b>	Community Outreach; letters, newspaper ads and public open house - Finalize proposed route options after community engagement
<b>Mid 2015</b>	Submit application to the Virginia State Corporation Commission for consideration
<b>Late 2016</b>	Begin preliminary construction work – forestry, right of way clearing, etc <i>(pending necessary approvals)</i>
<b>Spring 2018</b>	Energize line and substation
