Warrenton-Wheeler-Gainesville Electric Transmission Project

Use your iPhone camera or the QR reader app on other smartphones to visit the project page on our website.

AT DOMINION ENERGY, maintaining safe, reliable electricity for our customers is our top priority. We have now completed the major construction activities on the Warrenton-Wheeler-Gainesville 230 kilovolt (kV) reliability project in Prince William and Fauquier counties.

Our progress includes:

- The permanent transmission line running between our Remington Combustion Turbine and Warrenton Substation in Fauquier County has been completed and energized.
- The temporary transmission line running between our Remington Combustion Turbine and Warrenton Substation is currently being removed.
- The permanent transmission line between our new Vint Hill and Wheeler substations in Prince William County has been completed and energized.
- The upgrades to the transmission line running between our new Wheeler and existing Gainesville substations are complete and energized.

The right of way restoration has already begun in some areas and will continue in all areas throughout 2019. Please be mindful that weather events may affect when and how land restoration can occur. Thank you for your patience throughout the duration of this project.
