Work will be conducted along the Export and Array Cable path from late-April through June 2020, weather permitting. Work will consist of preparing and installing the 27-mile export cable and the array cable. These activities will utilize multiple vessels (shown below) that will be conducting the following activities; conduct pre-lay grapnel run, conduct pre and post surveys, conduct cable lay and trenching. The Cable will be laid on the surface and then trench to a depth of approximately 1.5 to 2.4 meters. The high-level schedule is shown for these activities (schedule is subject to change). See the PATONs and LNTMs on the CVOW Pilot website for additional details.
