ABOUT THE PROJECT
Dominion Energy has proposed the Tri-West Project to help meet growing demand for natural gas to serve Midwest markets. The project would move natural gas from Pennsylvania to Ohio.

Total cost of the project is about $24 million. The project would provide 120,000 dekatherms per day of firm transportation service, which would supply enough natural gas for a single winter day to about 110,000 households. It would include modifications at an existing compressor station, new metering and regulation facilities, as well as a 1.75-mile pipeline lateral. The project is expected to be in-service late 2020.

OHIO PROJECT FACILITIES
The Ohio project facilities and upgrades are proposed within Licking and Tuscarawas counties. The Licking County upgrades will be the re-wheel of three existing compressor units at the existing Newark Compressor Station. In Tuscarawas County, a new gas measurement and regulation (M&R) facility will be installed at a delivery point located at the end point of a 1.75-mile pipeline lateral from the existing Gilmore Station to an existing pipeline.

METERING AND REGULATION FACILITIES
A metering and regulation (M&R) facility serves two separate functions, metering and regulation.

**Metering:** Allows Dominion Energy to monitor or measure the amount of the natural gas transported through the pipeline and understand exactly how much has been delivered or received.

**Regulation:** Consists of equipment installed for automatically reducing and regulating pressure and/or flow control in the downstream pipeline to remain within the maximum allowable operating pressure. Regulating gas pressure is accomplished by valves, control instruments and other equipment.

ENVIRONMENTAL STEWARDSHIP
Dominion Energy is committed to providing safe, clean, and reliable energy. Responsible stewardship of natural resources is a priority for the company. Dominion Energy will evaluate potential environmental impacts resulting from the Tri-West Project and will work to minimize these impacts to the greatest extent possible.

SAFETY
Dominion Energy is committed to safe operations, safe facilities, and safety-minded employees. From construction through operations, safety will be the company’s top priority. Dominion Energy maintains operating policies and procedures that adhere to United States Department of Transportation (USDOT) safety requirements. These policies and procedures are periodically reviewed by USDOT, and all operating personnel are thoroughly trained to perform their activities in accordance with these policies and procedures. These policies provide specific directions in inspection, testing, operation, preventive maintenance, repair, and vigilant patrols of facilities, as well as procedures to be followed in the event of an emergency.
