## Staunton-Harrisonburg 115 kV Electric Transmission Rebuild Project – Soil Boring

Use your iPhone camera or the QR reader app on other smartphones to visit the project page on our website.

AT DOMINION ENERGY, we are committed to providing safe and reliable electricity to our neighbors. You are receiving this postcard because we would like to provide an update to the Staunton-Harrisonburg 115 kilovolt (kV) Electric Transmission Line Rebuild Project.

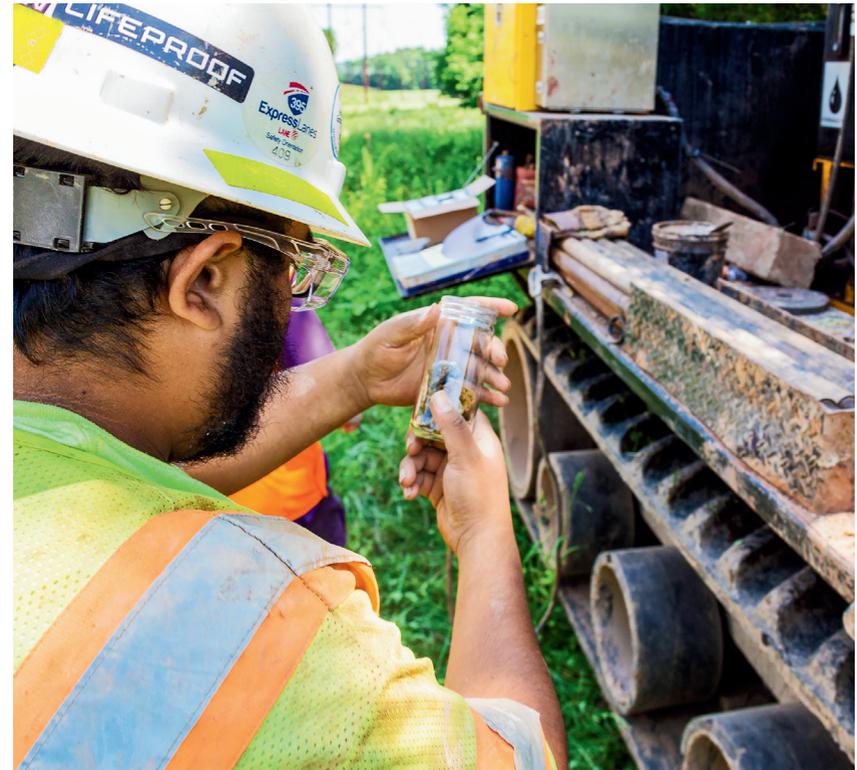

Preconstruction activities are scheduled to begin. Throughout the next few weeks, you may notice our crews or contractors accessing properties along the right of way corridor to place stakes for soil boring.

The soil boring process includes drilling holes to sample the soil and assess its makeup. Soil borings help ensure future foundations will provide adequate stability for transmission structures. The holes will be refilled after testing is complete.

We do not anticipate any interruptions to your electric service due to this project. We will continue to update you as activities progress. Thank you for your patience and understanding as we work to complete this important project.
